JustFoodForDogs Veterinary Supplements

Our veterinary supplements are backed by the expertise of our two staff veterinarians. Dr. John Tegzes VMD, Dipl. ABVT has personally researched and chosen each formulation and oversees their safe production and Quality Control. Dr. Oscar Chavez, Chief Medical Officer, has carefully selected the scope of supplements we offer, and has chosen only those that can be made ensuring the highest quality available. As with all of our food, JustFoodForDogs® line of veterinary supplements are made in an FDA registered human grade facility, maximizing their bioavailability and ensuring the strictest quality control. Companies which make products strictly for animals do not need to adhere to new FDA regulations that apply to products like ours, which are produced in a human grade GMP certified facility in California, USA. Our veterinary supplements address some of the most common ailments found in dogs today and unlike many pet supplement companies, we are entirely transparent. All of our supplements are unconditionally guaranteed. If you are less than pleased with the result of our product for any reason, simply return any unused portion of the product for a full and complete refund.

Fructooligosaccharides	20mg

Other ingredients: Gelatin (capsule), Microcrystalline Cellulose

Probiotic Live
 Supports Digestion & Promotes
 A Healthy Intestinal Flora
 (60 capsules)

Newport Beach Kitchen

The stomach, small intestine and large intestine are commonly referred to as the “gastrointestinal tract,” or “GI tract” for short. It is here that the food, water, and nutritional supplements that dog’s eat are processed and the nutrients, energy, and moisture are absorbed. Scientific research has shown that the GI tract is alive with microorganisms that help to process the food and facilitate the absorption of nutrients. But these microorganisms can be altered negatively by eating highly processed foods and poor quality ingredients. Fortunately, probiotics can help to provide beneficial organisms that compete with and replace harmful microorganisms. Not only do these beneficial organisms help restore health to the GI tract, they promote healthy absorption of nutrients, energy, and moisture. The result is healthier absorption and utilization of

nutrients. And new research is showing that a healthy GI tract helps to improve overall immune functioning that is helpful in combating and preventing infectious diseases. For these reasons daily supplementation with probiotics is beneficial for all dogs.

Probiotics are also helpful during and after treatment with antibiotics. Veterinarians often prescribe antibiotics to dogs when they are experiencing an infection. While they are effective at eradicating disease-causing bacteria, they also inadvertently can destroy the beneficial bacteria in the GI tract. It is therefore important to help re-establish these beneficial bacteria during and after any treatment with oral antibiotics.

JFFD Probiotic Live supplies six strains of helpful microorganisms, with each dose containing 5 billion colony-forming units, or CFUs. These have been carefully selected and balanced to promote healthy digestion in dogs. To help maintain viability of these organisms they have been spray-dried (vs freeze-dried). This is done to maintain these organisms in a state that allows for quick activation after administration. It is therefore important to keep this supplement in the refrigerator. Finally, our probiotics are designed to be given long-term for lifetime promotion of health.
